# ISP 1000

ΔΙΔ

Representative sample taking is one of the basic requirements to measure aerosols correctly with a high-quality aerosol spectrometer, e.g., the welas<sup>®</sup> digital or the Promo® system. To always have a repeatable and representative sample taking, Palas® provides the sample-taking system ISP 1000.

#### **BENEFITS**

- Exchangeable isokinetic sampling nozzles for different gas velocities
- Indicator for sample tube orientation
- Adjustable height of sampling point
- + Easy installation to the welas  $\ensuremath{\mathbb{R}}$  aerosol sensors

#### **APPLICATIONS**

- Isokinetic sample taking for welas  $^{\ensuremath{\mathbb{R}}}$  aerosol sensors out of gas flows
- Sample taking in accordance with EN 779, ASHRAE 52.2, ISO FDIS 16890 for welas<sup>®</sup> aerosol sensors

## PALAS

### DATASHEET

Diameter

Inside = 6 mm, outside = 8 mm Dimensions

Tube length 1: 200 mm, tube length 2: 500 mm, tube turn: 90°
