## MMTC 2000 EHF

In this version, the filter holder MMTC 2000 EHF is made of V2A to cover a higher temperature range. Adding heating and insulation allows filter testing at temperatures up to 250  $^{\circ}$ C.

In addition, the relative humidity can be controlled on this system up to 80% rel. humidity at a maximum temperature of  $90\,^{\circ}\text{C}$ .

## **BENEFITS**

- Internationally comparable measurement results thanks to the widespread use of the MMTC 2000 measurement system
- High reproducibility of the testing method
- Different dusts from real applications can be used
- Quick and easy adjustment of the raw gas concentration
- Simulation of the so-called garland effect
- Suitable for in-situ measurements
- Online measurements of the particle size and particle concentration with the light scattering spectrometer welas® digital
- MMTC 2000 EHF: This test rig can be heated to 250°C; the relative humidity can be set to levels up to 80% (at a temperature of 90°C).
- · Lightweight, small, and mobile design
- Easy handling, easy cleaning
- Quick set-up time when changing the filter or test dust
- Validation of the clear function of individual components and the overall system during pre-delivery acceptance testing
- · Reliable operation
- Short set-up times, extremely low-maintenance
- The unit will reduce your operating costs

## **APPLICATIONS**

- Standardized test in accordance with VDI 3926
- Individual tests under close-to-real conditions as defined by the different process conditions, e.g., in the cement industry, wood-processing industry, pharmaceutical industry, chemical industry, nuclear power plants, and many other areas...
