## **MP 30**

MP 30 are microparticles with a mean diameter of 29.41  $\mu$ m. The distribution of this dust is monodisperse; the geometric standard deviation of the distribution is only 3.4  $\mu$ m. Due to this small distribution, these dusts are used for scientific analysis and can also be used to calibrate measuring devices.

## **BENEFITS**

## **APPLICATIONS**

- Solid particles with very small monodisperse distribution
- Long service time of the created aerosol

## **DATASHEET**

Particle material	РММА	Particle diameter (ma-ximum)	75 μm
Particle diameter (mi- nimum)	0.5 μm	Particle diameter (mean)	29.41 μm
Geometric standard deviation (volume)	3.4 μm
